

### CLAIM AMENDMENTS:

1. (Currently amended) An aliphatic polyester resin composition contains a compound (A) of 1.0 mass part to 100 mass parts expressed by the following formula (1) as a plasticizer to an aliphatic polyester of 100 mass parts, wherein said aliphatic polyester resin is a lactic acid polyester.

Formula (1)

in the formula, X denotes a trivalent polyalcohol frame;  $\text{R}^1$ ,  $\text{R}^2$ ,  $\text{R}^3$  are selected from an acyl group having 2 to 18 carbon atoms or a hydrogen atom; and where  $\text{R}^1$ ,  $\text{R}^2$ ,  $\text{R}^3$  contain at least one acyl group having 8 to 18 carbon atoms, the sum total of carbon numbers of  $\text{R}^1$ ,  $\text{R}^2$ ,  $\text{R}^3$  is 10 to 22; and the average acylation rate is [[50]] 55 to 90% to obtain high solvent resistance to a paraffin system solvent.

Claims 2-3 (Cancelled)

4. (Previously presented) Sheets, films, or products molded from the aliphatic polyester resin composition described in claim 1.
